Vicom Cloud
Readiness Assessment

Are you Ready for the Cloud?

Cloud Computing is changing the IT landscape in terms of how to deliver and utilize IT infra- structure. While the term Cloud Computing is a fairly new, in the end it's about the delivery and utilization of IT infrastructure and services. Therefore the concept of what Cloud Com- puting is all about has been around for as long as IT infrastructure has been available: How do you deliver the IT services and resources needed to allow the organiza- tion to focus upon businesses challenges and strategy and not have to worry about the underlying technology itself. It also forces organizations and IT departments to look at (and adapt as necessary) their business models for procuring IT services and to consider whether to procure technol- ogy for IT infrastructure (CapEx) versus "renting it" as an operational expense (OpEx) through a Cloud service provider. And the concept of Cloud Computing is all about OpEx. A properly adopted Cloud strategy can help to free up internal IT resources from focusing upon building and maintaining technology and infrastructure to focusing on key, higher value, strategies that improve overall business value.

Vicom's Cloud Readiness
Assessment Provides the
Following Business Benefits:
• Identify critical success factors
• Align Cloud strategy with business strategy
• Identify potential constraints and risks
• Articulate system requirements (network and security)
• Develop design criteria
• Determine cost benefits through TCO/ROI analysis

Steer your sucess toward the cloud

More and more organizations are looking to see where Cloud Computing fits within their environments. And for many, it starts with small workloads such a test/dev, QA and non-critical business critical applications. But as organizations see and experience the benefits of Cloud Computing and how it can be a viable alternative to delivering and utilizing infrastructure, you will see more workloads moved to the Cloud. As more workloads are moved towards the Cloud, it must be done prudently, effi- ciently and securely. That means under- standing the overall goals and objectives and how the use of Cloud would fit within an organizations overall processes, stand- ards, and methodologies. This where a trusted partner such as Vicom can help.

Vicom Cloud
Readiness Assessment

Take the Cloud Journey with Vicom

Vicom's Cloud Readiness Assessment and Workshop offerings help organizations to evaluate their overall IT services delivery strategy, maturity for a Cloud based architecture, which types of Cloud to use and recommend which applications may be moved to the Cloud.

In addition we will evaluate the overall benefits of moving a specific workloads to the Cloud and evaluate the risks to the business units, look at process controls and the management of technology in the Cloud, which is key. This is applicable whether an organization is looking to move all of their workloads to a Cloud platform or a hybrid approach where workloads need to run on premise and as well as in a public Cloud and requires the ability to move workloads between each.

Get Expert with Your Cloud Adoption

Customers use Vicom's Cloud Readiness Assessment to help in the adoption of Cloud Computing and find great benefit in reducing time to market and increasing time to value. Vicom's expertise and wide range of knowledge of the Cloud, virtualization, enterprise man-agement, IT business management and process will help accelerate adoption to the Cloud.

Let Us Help

Our Cloud Readiness Assessment brings an outside, objective perspective on the best way to approach, design and implement an overall Cloud strategy. It will provide an analysis of key workloads, existing technology, even existing Cloud deployments and how to best deploy and optimize them specifically for your organization and needs. Please contact Vicom today and inquire about our Cloud Readiness Assessment offering. We can help you bring clarity on how the evaluate and move to the Cloud.
